Our Purpose

To design sustainable environments for a happier future for both people and our planet.

Year Ending March 31, 2031 Long Term Vision

Be the Takara of the community

Review of the Medium-term Management Plan

Seven Pillars of the Medium-term Management Plan

Achievements

Ongoing Challenges

1

Further growth of core businesses

In Japan, we have expanded urban redevelopment projects and promising construction projects throughout the country to promote community-based urban development. Overseas, we have leveraged the expertise we cultivated in Japan to develop condominium businesses in Vietnam, Thailand, and the Philippines.

Longer balance sheet retention periods due to inflation and longer construction periods.

2

Maximized group synergies

We have strengthened the asset management business and expanded the scale of assets by taking a pipeline of extensive and diverse income-producing properties that take advantage of our development capabilities in the core real estate business, and selling them to REITs.

Started developing products that exploit synergies between the real estate and energy business.
Cost control for implementation in all projects.

3

Optimized business portfolio

To achieve further growth in the future, we have created a roadmap to 2030 that aims to break away from a business portfolio that relies solely on the real estate business and make the energy business the second pillar of our operations.

Lower than expected share of the energy business in the portfolio.
Need to increase the amount of development.

4

Establishment of a stable financial ground

Developed a scheme to secure stable recurring income despite increase in borrowings, etc. as a result of making a tender offer bid (TOB) for Takara Leben Infrastructure Investment Corporation. A V-shaped recovery is expected from the fiscal year ending March 31, 2025.

Although the implementation of TOB for Takara Leben Infrastructure Investment Corporation caused a temporary decline in the capital adequacy ratio, the subsequent public offering (PO) helped the ratio recover to the 20% range. We will strengthen our financial base with a stable target of 23%.

5

Improvement of productivity and creation of new services through promotion of DX

Aiming to unify platforms in the Group, we have built a one-time-only system, a multi-tiered platform, and an end-to-end integrated system, and so on.

The promotion of DX helped to improve operational productivity, but did not lead to the creation of new services.

6

Proactive ESG considerations

CO2 emission reduction targets were established to achieve carbon neutrality.
We collected data from each company and disclosed Scope 3 emissions.

TNFD compliance will be promoted in the future.

7

Personnel development and establishment of the rewarding workplace environment

We actively invested in human capital. We increased employee base salaries and starting salaries for new graduate hires. We are cultivating young employees who will lead the next generation by conducting selective training to foster problem-solving thinking from a manager's perspective.

Further strengthening of human capital.
Increased productivity through optimised allocation of Group personnel.

Recognition of challenges to achieving the long-term vision

External Environment

Aging population and declining birth rate

Setting Group-wide goals to achieve a decarbonized society

MIRARTH Holdings has set a goal of reducing greenhouse gas emissions from its business activities by 45% by FY2030 and to net zero by FY2050.

To achieve our medium- and long-term targets, we are working to implement energy-saving measures, utilize renewable energy, and reduce GHG emissions during construction and operation as reduction measures.

MIRARTH Holdings Group's Goals to Achieve a Decarbonized Society Group-wide greenhouse gas emissions

 **Achieving a 45% reduction by FY2030**

(compared with FY2022 levels)

 **Achieving net zero emissions by FY2050**

Scope 1, Scope 2, and Scope 3*1 are covered.

Conceptual Image of Greenhouse Gas Emission Reductions

*1

Scope 1: Direct emissions of greenhouse gases by businesses themselves (combustion of fuels such as city gas).
Scope 2: Indirect greenhouse gas emissions resulting from the use of electric power, heat and steam supplied by other companies
Scope 3: Indirect greenhouse gas emissions, which does not fall under Scopes 1 and 2 (emissions from other companies associated with the activities of the reporting company)

*2 Scope 1 and Scope 2 are to be reduced by 70% by FY2030.

*3 Neutralize residual emissions by utilizing forest-derived absorption and carbon removal technologies outside the value chain.
